

## One-stop technology solution for your ESG journey

Consciousness of Environmental, Social & Governance (ESG) responsibilities of organizations is increasing across the world. Regulators globally are responding to this by requiring significant disclosures from organizations. This challenge increases manifold for organizations with global operations, given that regulations in each country may vary. Requirements around ESG disclosures and actions are also driven by pressure from investors, lenders, and customers.

Given the growing importance of disclosures, significant data integrity requirements, and varied and disaggregated data sources, enabling the ESG journey through technology is essential. Tech enablement also helps ensure the integration of ESG programs with core business operations.

ESG UniVerse is a cloud-based solution built using the foundation of Goodera ESG, a business that Uniqus acquired. The platform incorporates features which help organizations traverse efficiently through their entire ESG journey, ranging from disclosures and greenhouse gas accounting to value chain assessment. With a unique blend of strong ESG domain capabilities and innovative GenAI-based technology, ESG UniVerse streamlines data management, enhances user experience, and supports organizations in achieving their long-term ESG goals.

# ESG **uniVERSE Modules**

## ESG Disclosures and Reporting

- Ability to disclose across ESG reporting frameworks and ratings system such as GRI, CSRD, ISSB, TCFD, BRSR, DJSI, CDP, EcoVadis, MSCI
- Comprehensive KPI library spanning major ESG reporting and ratings framework
- Auto-mapping capabilities ensure that data captured once is used for multiple reporting and ratings requirement
- Ability to download structured ESG report through our report builder - Integrated with our Gen AI model for enriching content for reporting.
- ESG performance analysis using customizable dashboards

### Benefits

The platform captures information, generates reports required by different reporting standards and frameworks and varied stakeholders (regulators, rating agencies, investors, customers) from a central data library.

## Greenhouse Gas (GHG) Inventorization

- Inventorization in accordance with GHG Protocol
- Data collection from across the value chain for emissions calculation under Scope 1, 2, and 3
- Latest emission factors from Defra, IPCC, EPA, CEA allowing input customization in emission factors
- Emission hotspots tracking and targets monitoring
- Facilitates the use of GHG emissions data seamlessly for varied reports
- Use of technologies like OCR and data automation to facilitate seamless data input

### Benefits

Organizations may not have sufficient internal resources for complex calculations around GHG emissions and similar specialized areas. Use of automation from the platform will help address this.

## Value Chain Assessment

- Customized surveys for data collation from tier 1, 2, 3 suppliers
- Assessment of the value chain's ESG performance
- Assesses gaps and aligns organization's targets with value chain partners
- Report generation for value chain partners with score card and improvement suggestions

### Benefits

The platform enables organizations to obtain, monitor and analyze data efficiently across the value chain, saving time and resources.

*Uniquus will continuously invest in building and releasing additional modules and features in response to the evolving ESG landscape*

# Why ESG UniVerse?

## Blend of consulting and technology

Our ESG UniVerse deployment is strongly aided by a team of professionals adept at providing ESG consulting globally. At a time when ESG frameworks, standards and regulations are evolving, having consulting expertise builds robustness into technology adoption and implementation which helps to get it right the first time.

## Full suite of ESG solutions

The modules with state-of-the-art user interface and experience address ESG requirements comprehensively. The modules are designed for relevance across multiple sectors and geographies.

## Rich database and libraries

Comprehensive knowledge repositories and KPI libraries for addressing requirements around reporting and disclosure under global frameworks and standards such as GRI, CSRD, ISSB, BRSR, TCFD. Further, our database also includes all emission coefficient libraries to address Scope 1, 2, and 3 emissions for various sectors.

## Efficiency and productivity

Technology features such as auto mapping, machine learning, data automation, and a report builder streamline ESG deliverables for better communication with internal and external stakeholders. Our platform is capable of integrating and mapping multiple reporting standards and ratings system, thereby eliminating redundant efforts and significantly boosting efficiency. The product includes UniQuest, our web-based AI-powered research product, designed to perform research and manage knowledge on ESG.

## Transparency and auditability

ESG UniVerse accurately meets regulatory and reporting requirements and fosters trust among stakeholders. The platform has a 'maker,' 'checker,' and 'approver' workflow to ensure data integrity. The supporting documents for data provided can be stored on the platform and later retrieved for verification.

## Analytics and dynamic dashboards

The platform has the ability to meet customer requirements on reporting, forecasting, and trend analysis. This helps to identify risks and prepare the organization to take appropriate measures. Results are displayed through a rich source of customizable charts, graphs, and interactive elements.

## Accounting rigor to ESG reporting

We integrate our knowledge and experience in the ESG domain with equally strong capabilities in financial reporting, internal controls, auditing standards, and regulatory reporting.

## Data automation

Automate data collection, eliminate duplication of data and ensure a single source of truth by connecting existing data sources like ERP to the ESG UniVerse platform. Our strong technology team can ensure seamless integration between client's systems and our platform.

## Enhance performance with Gen AI capabilities

Our ESG Universe solution has Gen AI capabilities allowing organizations to enhance data collection & analysis, enrich content for reporting & disclosures, facilitate research across ESG landscape & provide insights for meeting an organization's short & long term ESG vision.
